

RISK CATEGORIZATION

SEPTEMBER 29, 2020

ENTRY AND QUARANTINE POLICY SABA

Reference is made to the entry and quarantine policy of Saba and the latest emergency ordinance. This is the updated risk categorization of countries as of September 28. **All persons that want to enter Saba must email info@Sabagov.nl to ask approval from the Island Governor.** Requests are dealt with case by case. Persons from high-risk areas and medium-risk areas can be subjected to additional measures such as quarantine upon arrival and testing prior to and after arrival.

Risk	Countries
Low	Anguilla, St. Kitts and Nevis
Medium	Canada, St. Eustatius
High	South, Central, North America, Dominican Republic, Sint Maarten, Aruba, Bonaire, Curaçao, Netherlands, Most of Europe

Further explanation regarding the decision for this categorization per country;

Travel from Anguilla and other low risk areas

Anguilla and some other places are categorized as low risk. There is a comparable favourable epidemiological situation as Saba. This means that leisure travel/tourists are permitted to visit from these locations, if traveling direct to Saba, without additional testing and quarantine requirements.

Travel from Sint-Eustatius

St. Eustatius is categorized as medium risk. It does not have a comparable favourable epidemiological situation as Saba. There has been community transmission cases registered of Covid-19. This means that travel exceptions for travel to Saba are only possible for repatriation, essential workers, medical travellers, medical students, and Saban students that live abroad with additional quarantine requirements.

Travel from Canada

Europe is categorized as medium risk. It does not have a comparable epidemiological situation as Saba. With additional travel measures, such as a quarantine upon arrival and hygiene measures, the risk can be mitigated. This means that travel exceptions for travel to Saba are only possible for

repatriation, essential workers, medical travellers, medical students, and Saba students that live abroad with additional quarantine requirements.

Travel from Bonaire

Bonaire is categorized as high risk. It does not have a comparable epidemiological situation as Saba. There is a lot of local transmission of Covid-19, and the risk of infection and introduction by travellers from this area is high. This means that travel exceptions for travel to Saba are only possible for repatriation, essential workers, medical travellers, medical students, and Saba students that live abroad with additional quarantine requirements and testing requirements before and after arrival.

Travel from Curaçao

Curaçao is categorized as high risk. It does not have a comparable epidemiological situation as Saba. There is a lot of local transmission of Covid-19, and the risk of infection and introduction by travellers from this area is high. This means that travel exceptions for travel to Saba are only possible for repatriation, essential workers, medical travellers, medical students, and Saba students that live abroad with additional quarantine requirements and testing requirements before and after arrival.

Travel from Aruba

Aruba is categorized as high risk. It does not have a comparable epidemiological situation as Saba. There is a lot of local transmission of Covid-19, and the risk of infection and introduction by travellers from this area is high. This means that travel exceptions for travel to Saba are only possible for repatriation, essential workers, medical travellers, medical students, and Saba students that live abroad with additional quarantine requirements and testing requirements before and after arrival.

Travel from Sint-Maarten

Sint Maarten is categorized as high risk. It does not have a comparable epidemiological situation as Saba. There is a lot of local transmission of Covid-19, and the risk of infection and introduction by travellers from this area is high. This means that travel exceptions for travel to Saba are only possible for repatriation, essential workers, medical travellers, medical students, and Saba students that live abroad with additional quarantine requirements and testing requirements before and after arrival.

Travel from the Netherlands

The Netherlands is categorized as high risk. It does not have a comparable epidemiological situation as Saba. There is a lot of local transmission of Covid-19, and the risk of infection and introduction by travellers from this area is high. This means that travel exceptions for travel to Saba are only possible

for repatriation, essential workers, medical travellers, medical students, and Saba students that live abroad with additional quarantine requirements and testing requirements before and after arrival.

Travel from most of South, Central, and North America

South, Central, and North America are categorized as high risk. It does not have a comparable epidemiological situation as Saba. There is a lot of local transmission of Covid-19, and the risk of infection and introduction by travellers from this area is high. This means that travel exceptions for travel to Saba are only possible for repatriation, essential workers, medical travellers, medical students, and Saba students that live abroad with additional quarantine requirements and testing requirements before and after arrival.
